DAMI

Blood that arrives… before it's too late

An AI platform and medical drones for managing and delivering blood in emergencies

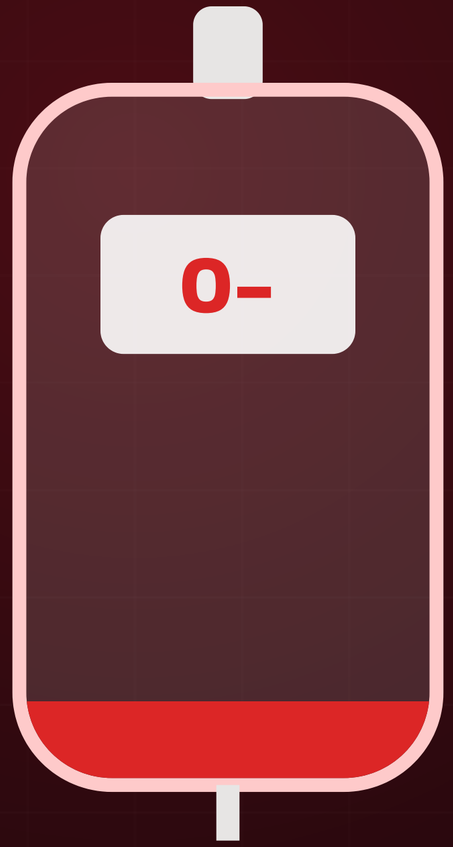

Team NEXORA · AI & Data Science

30–40%

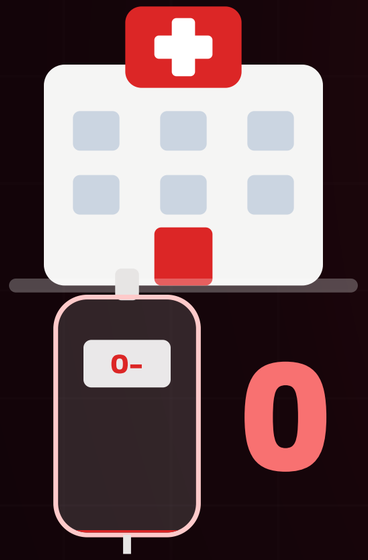

of trauma deaths are caused by bleeding

and every minute of delay raises the risk

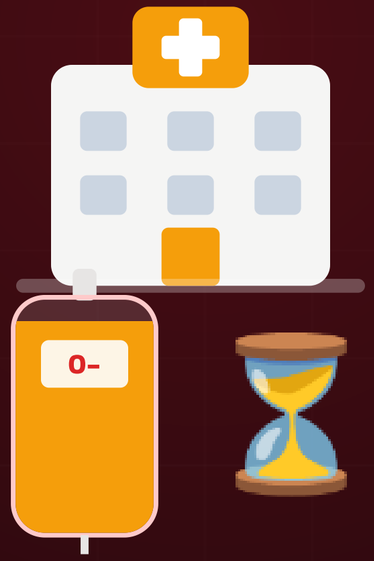

Source: Kauvar et al., Journal of Trauma, 2006

Shortage here... waste there

One hospital needs O– and has none

while units expire at another

5–7 days
platelet shelf life

Traffic
delays emergency transport

Generic drives
miss the missing type

The solution: DAMI

Forecast & balance

before shortage or waste

Call the donor

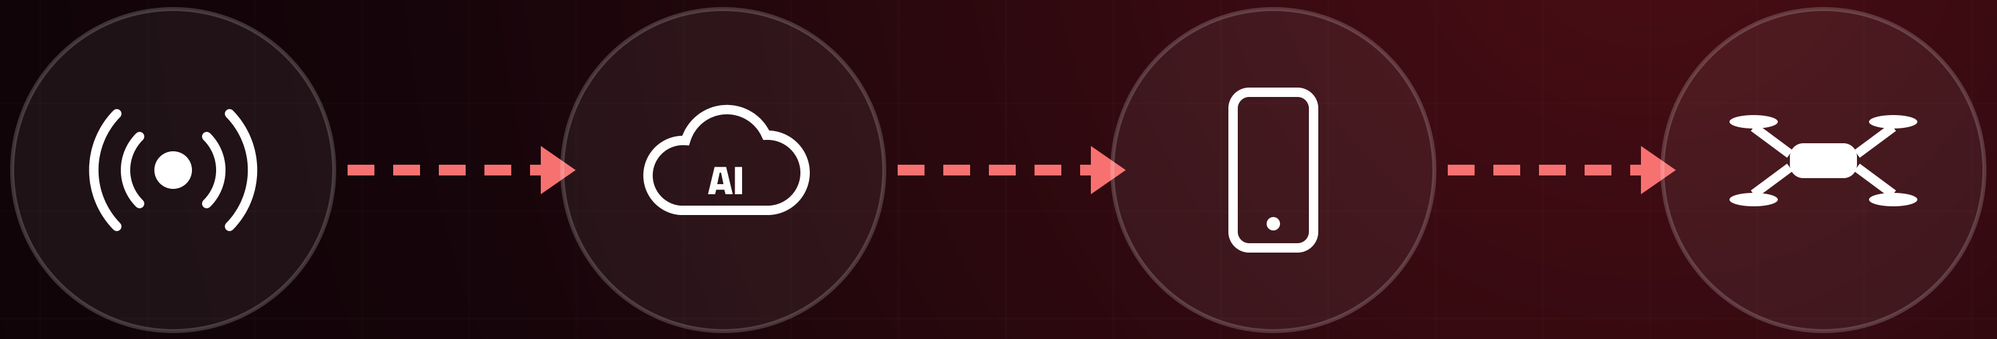

the right one, nearby

Blood drone

in minutes

How the system works

Blood-bank sensors

temperature + live stock

DAMI AI cloud

forecast + best source

Hospital app

one-tap emergency

Cooled drone

GPS + live temperature

The blood ambulance drone

2–6 °C box

temperature every second

4–6 units

per flight

Minutes

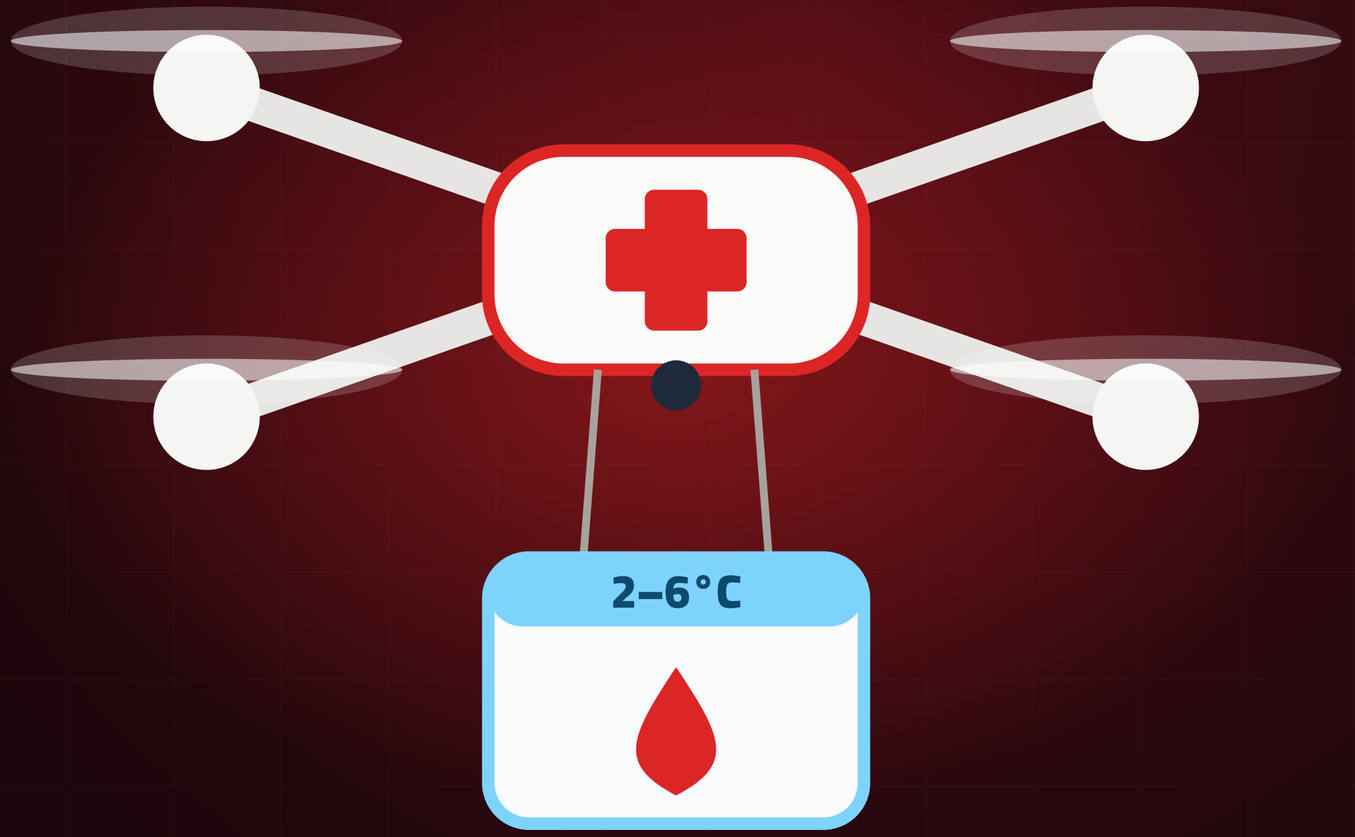

not half an hour

Live tracking

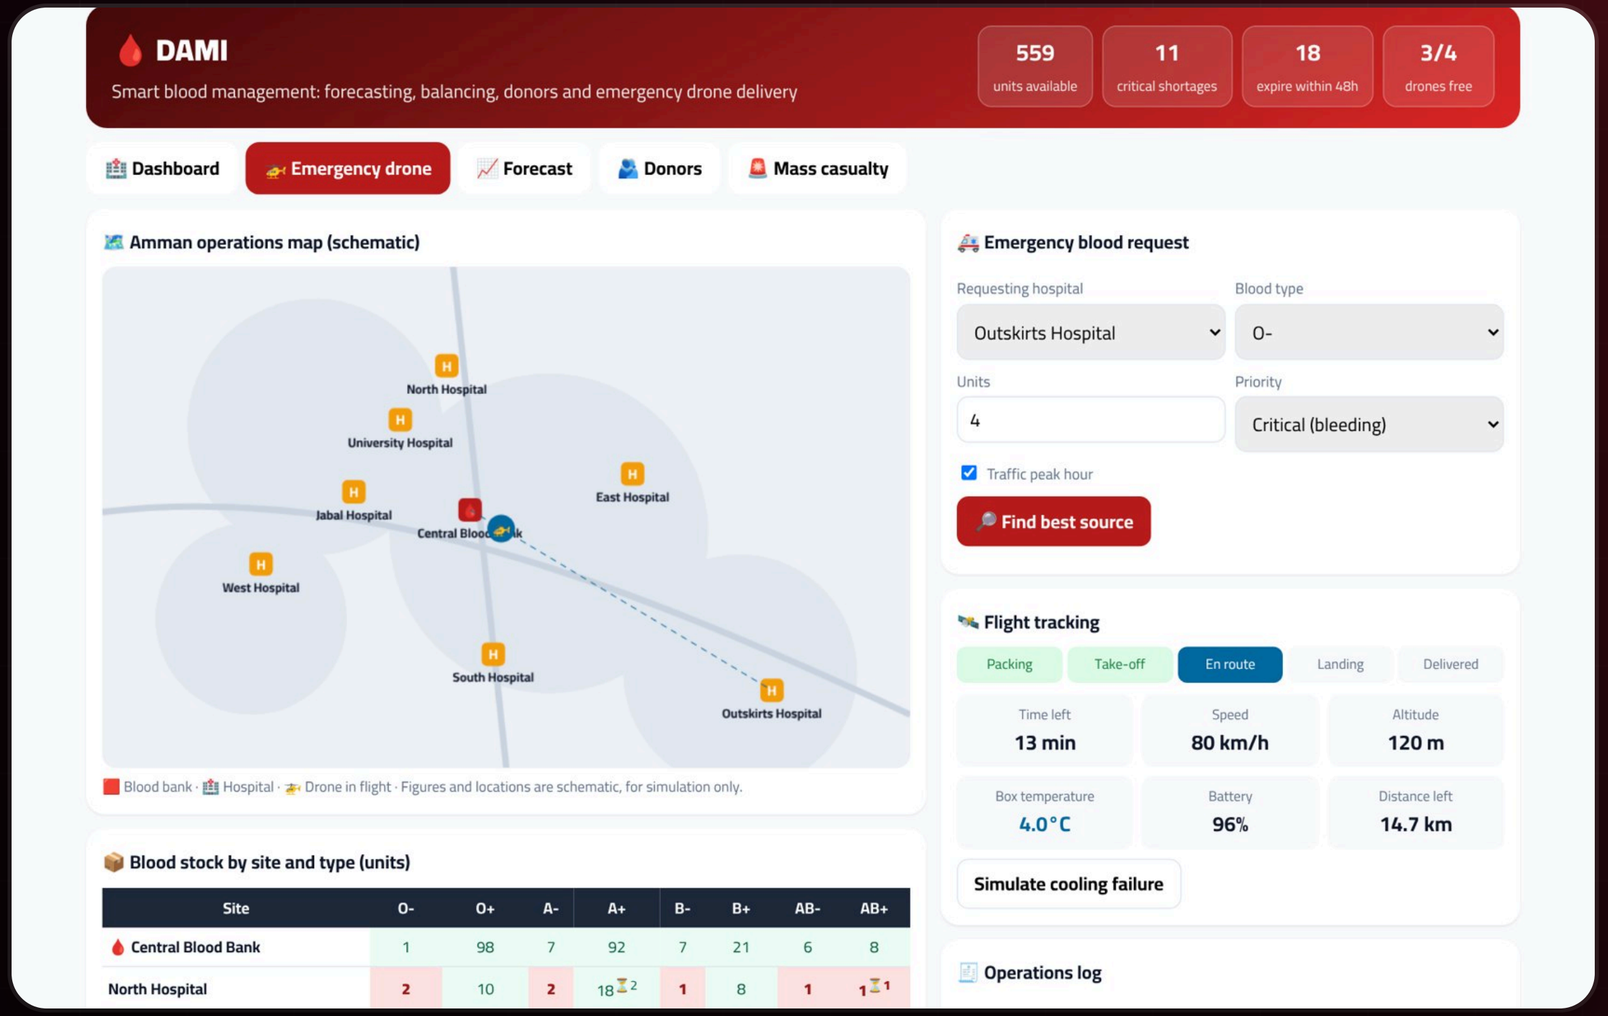

GPS, safe route

Safety

parachute, auto-return

The prototype works today

① Picks the best source

② Compares drone vs car

③ Alarms instantly if temperature rises

Proven worldwide

67%

drop in blood wastage after drone delivery in Rwanda

79 min

faster delivery

🇯🇴 **No similar system in Jordan per our preliminary research**

Source: Nisingizwe et al., The Lancet Global Health, 2022

Who pays?

JOD 6,000

hospital subscription / year

JOD 90

per emergency flight

JOD 40,000

national dashboard / year

JOD 10,000

donor-app sponsorship / year

72% gross margin in year 3
